Use Case Description: Gas Agency Management System is an online application for a gas agency that customers from different geographical regions use to book gas cylinders. It is owned and operated by a company called GAM. Gas agencies get booking requests in person or via phone calls. The main objective of this application is to provide an effective and automated gas booking procedure that is aimed to reduce the manual work for servicing customers effectively.

Planning and Design: Designed for GAM, the Gas Agency Management System (GasMS) automates cylinder bookings through three core workflows: Consumer Registration, Gas Booking, and Connection Transfer. A key design element is the dynamic pricing logic, which charges \$75 for domestic cylinders within a 12-unit annual subsidy limit and \$150 otherwise. The application enhances operational efficiency for Consumers and Managers by integrating automated email invoices, delivery tracking, and comprehensive performance reporting.

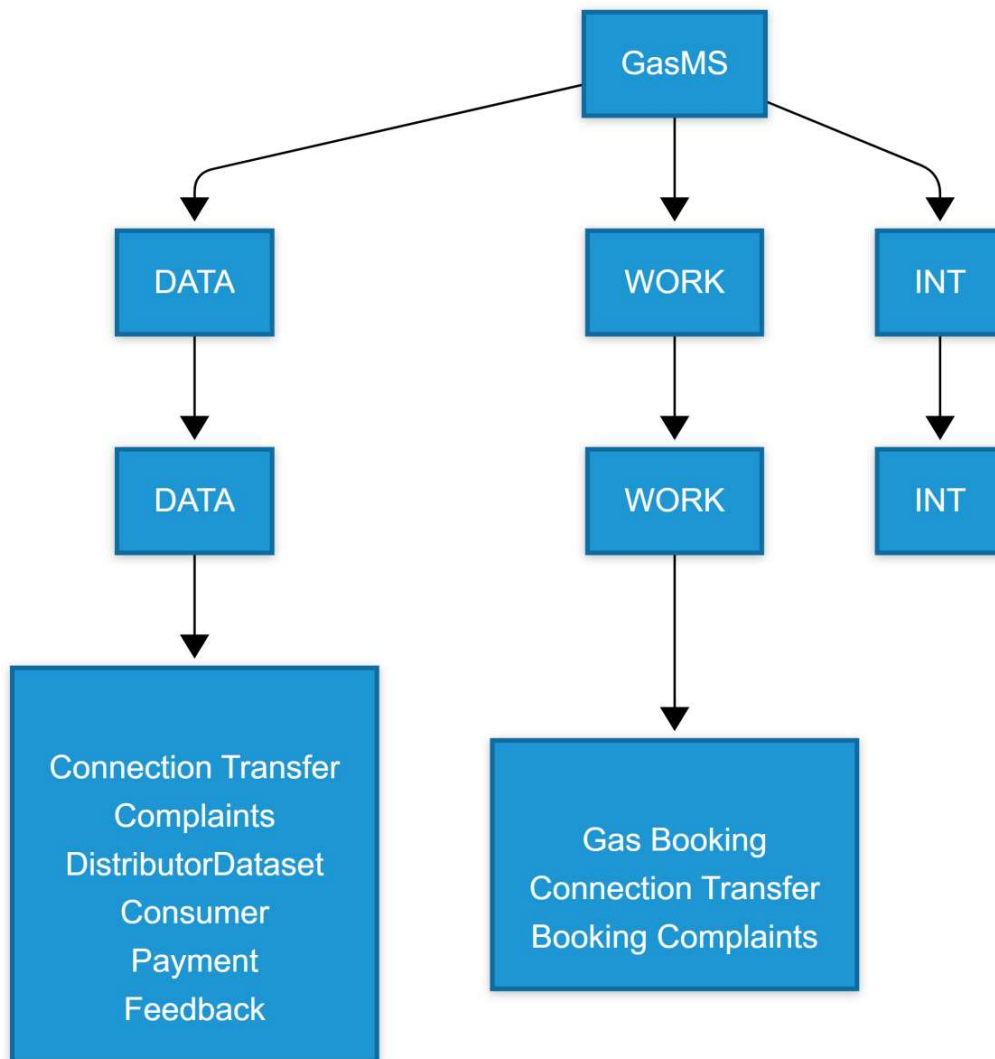

At a high level and with the initial phase I release, this application will:

- To be able to book a cylinder online, you should be a registered customer. If you are not registered, you can register online by providing details like consumer number, 17 digits LPG ID, Aadhar number, mobile number and contact address.
- After you have registered, you can log on to the Gas online portal using the registered phone no or email id.
- Once you have logged in, you will be able to book gas cylinder online easily. All you have to do is just enter the required details and submit the form to place an order.
- The order is then sent to the concerned distributor/agency and you will be able to pay to the distributor directly on delivery/ online through card or net banking. Also, you will be able to track the status of your booking online.
- Once delivery complete consumer will provide the feedback to the agency about the service.
- Agency manager will go through the consumer feedback report to modify or improve the better service.

ACTORS:

- **Consumer** – Consumers can book a cylinder by providing their consumer Id and can pay online at the time of booking or on delivery of the cylinder.
- **Agency Manager** – Approves / rejects the new consumer request and approves/rejects the request for booking s new cylinder

- GasMS: Users
- GasMS: Authors
- GasMs: Managers

WORK QUEUE:

To improve workload management and task routing in your application, create a work queue that holds assignments for operators and robotic queues. Because you associate a work queue with a group of users or a robotic queue, you logically and efficiently categorize work inside your organization.

Edit Work Queue: ManagerWorkQueue
